

Trauma factsheet

Salford Royal has been designated as the primary receiving centre for Major Trauma in Greater Manchester. The service is one of the largest in the United Kingdom serving a population of approximately 3.2 million. Over 1000 major trauma patients are admitted per year of which more than 600 have suffered a traumatic brain injury. Patients are brought directly to Salford Royal and also transferred from other hospitals across the region.

The co-ordinated clinical care provided by neurosurgery, neurology, neuro-intensive care, neuro-anaesthesia and rehabilitation has meant that the survival rates for head injury put us as one of the best performing hospitals in the United Kingdom. There is a dedicated trauma ward with staff experienced in the management of patients who have suffered trauma to allow a holistic approach to their management and rehabilitation.
